Android engineer with **5 years** building consumer apps at scale in **Kotlin and Jetpack Compose**. Owns revenue-critical features end to end (cart, checkout, payments, onboarding) and leads app stability work, including cutting a crash rate from **20%+ to 0.3%**. Strong in MVVM/Clean Architecture, Coroutines/Flow, performance profiling, and migrating legacy code without breaking production.

EXPERIENCE

Senior Android Engineer · Mylo (Pregnancy & Parenting App) — Mar 2026 – Present

- **Own end-to-end development of revenue-critical commerce flows** (Cart, Checkout, Payments, Address) in **Kotlin and Jetpack Compose** using **MVVM, Clean Architecture, Hilt, Coroutines and StateFlow**. Rolled out through **A/B experiments and feature flags** (Firebase Remote Config) with full analytics instrumentation.
- **Re-architected the NUX (New User Experience) and onboarding funnel** in Jetpack Compose: a progressive multi-step flow, OTP and Truecaller login, the **SplashScreen API** with seamless splash-to-home transitions, **Compose animations**, one **navigation entry gate** for every logged-out path, adaptive layouts, and **funnel analytics** to track activation and drop-off.
- **Drive app stability and performance**: **Crashlytics-led crash and ANR triage** every release, **memory-leak removal** using heap analysis and LeakCanary, and **app startup optimization** through lazy initialization and off-main-thread work.
- **Lead platform modernization**: **Android 16 (API 36)** target, **Play Billing 9**, Compose 1.7, **XML-to-Compose migration**, Gradle Version Catalog, **R8 optimization and resource shrinking**, edge-to-edge, and reduced build times.
- **Build scalable, reusable Compose UI components** (loading, error, offline and empty states, animations) and **server-driven UI** from backend configuration, with **localization (i18n)** for Hindi, Tamil and Telugu.
- **Engineer reliable background and notification systems** with **WorkManager, FCM, foreground services, deep linking and Room migrations**, so they survive process death and app kill.
- **Collaborate cross-functionally** with Product, Design, Backend and QA across **30+ releases**; **AI-assisted development**.

Stack: Kotlin, Jetpack Compose, MVVM, Clean Architecture, Hilt, Coroutines/Flow, Room, WorkManager, FCM, R8, A/B testing

Software Engineer (SDE-1), Android · WedMeGood (Wedding Planning Platform) — Jul 2024 – Mar 2026

- **Cut the crash rate from 20%+ to 0.3% (−98.5%)** by fixing LeakCanary-detected memory leaks and structured exception handling.
- **Built real-time vendor–couple chat** on Socket.IO with lifecycle-aware components, used by both the consumer and vendor (WedMeGood for Business) apps.
- **Started server-driven UI (SDUI)** so screens and remote config could change without an app release.
- Migrated Java and Kotlin synthetics to **Kotlin, Data Binding and Jetpack Compose**, and refactored key screens to MVVM + Hilt.
- Made API calls asynchronous with Coroutines and Retrofit, speeding up screen loads and reducing ANRs.

Stack: Kotlin, Java, Compose, Data Binding, Socket.IO, SDUI, LeakCanary, Crashlytics, Sentry, CleverTap

Junior Software Engineer, Android · Altruist Technologies — Oct 2021 – Jul 2024

- **Built Dependo Delivery from scratch, entirely in Compose**: 5,000+ downloads, 4.4-star rating and a **0.02% crash rate**. Used by Nykaa and Purplle, with VoIP calling (Linphone) and live tracking (Traccar).
- Integrated **UAE PASS** national-ID authentication and coupon management for the Redha Al Ansari foreign-exchange app.
- Shipped UPI payments, a new dashboard and push notifications for the Abuzz app; migrated Volley to Retrofit.

OPEN SOURCE & PROJECTS

- **Pretty JSON Logcat**: an **Android Studio / IntelliJ plugin** (IntelliJ Platform SDK) that pretty-prints JSON from Logcat, with a live **adb** tool window and per-app PID and log-level filters.
- **ML Kit Vision Lab**: **on-device ML** with **CameraX** and Compose running face, face-mesh, object, barcode, text and image-labeling detectors. **KMP apps**: **Kotlin/Compose Multiplatform** (Android + iOS) with Ktor and Voyager.

SKILLS

Languages	Kotlin, Kotlin Multiplatform (KMP), Java, Dart, XML
UI	Jetpack Compose, Material 3, XML Views, Data Binding, Animations, Edge-to-edge, Flutter
Architecture	MVVM, MVI, Clean Architecture, Dependency Injection (Hilt), Modularization, Server-Driven UI, SOLID
Async & Data	Coroutines, Flow/StateFlow, Retrofit, OkHttp, REST, Room, WorkManager, Socket.IO, FCM, Deep Links
Performance	Android Profiler, LeakCanary, heap analysis, R8/ProGuard, startup & ANR optimization
Tooling	Firebase (Crashlytics, Remote Config, Analytics), A/B Testing, Feature Flags, Play Billing, ExoPlayer, ML Kit, CameraX, Sentry, CleverTap, Gradle, Git, Jira, Figma

EDUCATION & ACHIEVEMENTS

B.Tech, Computer Science & Engineering · Maharaja Ranjit Singh Punjab Technical University — **2017 – 2021**
Winner, internal hackathon at WedMeGood · Android Developer Nanodegree, Udacity
