SUMMARY

Android engineer with 5 years of experience building consumer apps at scale in Kotlin and Jetpack Compose. Owns revenue-critical features end to end, including cart, checkout, payments and onboarding, and leads app stability work: cut WedMeGood's crash rate from 20%+ to 0.3% and raised Mylo's crash-free rate from 97% to 99.98%.

EXPERIENCE

Senior Android Engineer Mar 2026 – Present

Mylo, Pregnancy & Parenting App

- Own end-to-end development of revenue-critical commerce flows (cart, checkout, payments, address) in Kotlin and Jetpack Compose using MVVM, Clean Architecture, Hilt and StateFlow, rolled out via A/B experiments and feature flags.
- Re-architected the NUX (New User Experience) and onboarding funnel in Compose: progressive multi-step flow, OTP and Truecaller login, SplashScreen API transitions, a single navigation entry gate, and funnel analytics for activation and drop-off.
- Raised the crash-free rate from 97% to 99.98% on the latest build through Crashlytics-led crash and ANR triage every release, memory-leak removal (heap analysis, LeakCanary) and app startup optimization.
- Led platform modernization: Android 16 (API 36) target, Play Billing 9, Compose 1.7, XML-to-Compose migration, Gradle Version Catalog, and R8 optimization with resource shrinking.
- Built reusable Compose UI components and server-driven UI, with localization (i18n) for Hindi, Tamil and Telugu.
- Engineered reliable background and notification systems with WorkManager, FCM, foreground services, deep linking and Room migrations that survive process death.
- Collaborated with Product, Design, Backend and QA across 30+ releases, using AI-assisted development.

Software Engineer (SDE-1), Android Jul 2024 – Mar 2026

WedMeGood, Wedding Planning Platform

- Cut the crash rate from 20%+ to 0.3% (98.5% reduction) through Crashlytics and Play Console crash, ANR and OOM sweeps, LeakCanary leak fixes, background app startup, and a retry interceptor with de-duplicated 401 logout.
- Built the Write-a-Review module in Jetpack Compose with Clean Architecture (repository, 10 use cases, Hilt), the codebase's first fully layered Compose feature module (~5.6k lines).
- Rebuilt the vendor profile, the main pre-enquiry screen, and shipped a WhatsApp lead funnel with OTP verification, SMS OTP autofill and enriched lead attribution.
- Kept the app publishable on Google Play: targetSdk 35, edge-to-edge, 16 KB page-size support, Google Sign-In migration, and a Play-flagged intent-redirection security fix.
- Built real-time vendor–couple chat on Socket.IO, introduced server-driven UI (SDUI), and removed Kotlin synthetics and Anko in favour of Data Binding, Compose and MVVM.

Junior Software Engineer, Android Oct 2021 – Jul 2024

Altruist Technologies

- Built Dependo Delivery from scratch in Jetpack Compose (5,000+ downloads, 4.4-star rating, 0.02% crash rate), used by Nykaa and Purplle, with VoIP calling (Linphone) and live location tracking (Traccar).
- Integrated UAE PASS national-ID login and coupon management for the Redha Al Ansari exchange app.
- Shipped UPI payments, a dashboard and push notifications for Abuzz; migrated Volley to Retrofit.

OPEN SOURCE & PROJECTS

- **Pretty JSON Logcat**: Android Studio / IntelliJ plugin that pretty-prints Logcat JSON in a live adb tool window.
- **ML Kit Vision Lab**: six real-time on-device ML models on CameraX + Compose. **KMP apps**: Compose Multiplatform UI shared across Android and iOS.

SKILLS

Languages	Kotlin, Kotlin Multiplatform (KMP), Java, Dart, XML
Android UI	Jetpack Compose, Material 3, XML Views, Data Binding, Animations, Edge-to-edge, Flutter
Architecture	MVVM, MVI, Clean Architecture, Hilt (DI), Modularization, Server-Driven UI, SOLID
Async & Data	Coroutines, Flow/StateFlow, Retrofit, OkHttp, REST APIs, Room, WorkManager, Socket.IO, FCM
Performance	Android Profiler, LeakCanary, Heap Analysis, R8/ProGuard, Startup and ANR Optimization
Tools	Firebase (Crashlytics, Remote Config), A/B Testing, Play Billing, ExoPlayer, ML Kit, CameraX, Git, Figma

EDUCATION & ACHIEVEMENTS

B.Tech, Computer Science & Engineering, Maharaja Ranjit Singh Punjab Technical University 2017 – 2021

Winner, internal hackathon at WedMeGood | Android Developer Nanodegree, Udacity
